The options below allow you to configure the type of elements that are to be managed inside iTop.

- Configuration Management Core**
All the base objects that are mandatory in the iTop CMDB: Organizations, Locations, Teams, Persons, etc.
- Data Center Devices**
Manage Data Center devices such as Racks, Enclosures, PDUs, etc.
- End-User Devices**
Manage devices related to end-users: PCs, Phones, Tablets, etc.
- Storage Devices**
Manage storage devices such as NAS, SAN Switches, Tape Libraries and Tapes, etc.
- Virtualization**
Manage Hypervisors, Virtual Machines and Farms.

Select the choice that best describes the relationships between the services and the IT infrastructure in your IT environment.

- Service Management for Enterprises**
Select this option if the IT delivers services based on a shared infrastructure. For example if different organizations within your company subscribe to services (like Mail and Print services) delivered by a single shared backend.
- Service Management for Service Providers**
Select this option if the IT manages the infrastructure of independent customers. This is the most flexible model, since the services can be delivered with a mix of shared and customer specific infrastructure devices.
